

CALIFORNIA HEAT
HEATED CLOTHING

WHAT MAKES US SPECIAL?

Family-owned & operated in Maryland, known for goofy dad jokes and outstanding customer service

LIFETIME WARRANTY

We stand by our products with a lifetime warranty on the Finewire™ heating elements & clothing plugs

NO BUTTONS ALLOWED

Temperature controllers are separate from the clothing because when heat control buttons on clothes fail outside of your warranty, you're left in the cold

MIX & MATCH

We use plugs common to the industry plus have adapters to make our gear compatible with many other brands

DON'T CUT CORNERS

One of the only companies with gloves heating both sides of the hand and socks heating the entire foot

CARBON = BAD

Competitor's carbon wire & coatings break down over time, but our unique tech uses the most durable & long-lasting materials for a lifetime of heat

EXTENDED SIZES

Our sizes range from 2XS - 5XL, keeping everyone warm whether they are petite & small or big & tall

QUALITY CLOTHING

We invest in only the best materials including Cordura®, Thinsulate™, Kevlar®, Hipora® and Ripstop Nylon

ENFORCED MAP POLICY

Whether you are big or small, we want all our partners to have an equal opportunity to succeed, both online & in their stores

YEAR-ROUND R&D

New heated products and improvements are constantly being researched, developed & released all year

WE ♥ FEEDBACK

Communication is the key to success - Consumers, resellers & partners are encouraged to share insight on product improvements, positive experiences, new products, & educational materials.

You are the voice of Heated Clothing & California Heat!

ABOUT CALIFORNIA HEAT

After accumulating over 20 years of combined experience working for the industry's leading heated clothing manufacturer, the families realized people needed a quality, affordable brand they could trust. A clothing line was designed that incorporated the most cutting-edge technology and superior craftsmanship, confidently backed by a Lifetime Warranty. By listening to customer feedback for what they needed in a heated brand, then combining it with a passionate belief in personable customer care...California Heat was born.

FINEWIRE™ HEATING ELEMENTS & PLUGS

Finewire™ heating elements are hundreds of highly conductive microfibers bundled with heavy-duty coating then interwoven into fabric. This unique craftsmanship separates us from other brands that use less durable materials like carbon wires, which easily break down over time. Our unique design produces an extremely durable product that heats faster and lasts longer, ensuring comfortable warmth during any cold weather activity.

PRODUCT WARRANTIES

- 1 Year - Manufacturer Defects and Workmanship
- 90 Days - All Batteries
- 2 Years - All Controllers
- **Lifetime Warranty - Heating Elements AND Plugs**

HOW IS HEATED CLOTHING POWERED?

	7V GEAR	12V GEAR
MAIN POWER SOURCE	Each product includes a small, rechargeable 7V lithium-ion battery	Connect to a 12V power source using a Battery Harness, 12V Accessory Plug, SAE to Coax Female, or RCA to Coax Female
ADDITIONAL POWER OPTIONS	Connect to a 12V power source using the Hybrid Controller	12V 7000mAh Portable Battery
HEAT REGULATION	A 4-stage controller built into the 7V battery	Choice of multiple controllers based on the rider's needs & budget
DO PRODUCTS CONNECT TOGETHER?	NO Each product uses its own 7V battery, except when using a y-harness with gloves or socks	YES Each piece can be used independently or connect multiple clothing items together
TYPICAL CUSTOMERS	Anyone Outdoors - hunters, snow lovers, workers, first responders, athletes Those with circulatory issues - arthritis, Reynold's Disease	Motorcyclists, snowmobile riders, powersport enthusiasts, bus drivers, helicopter pilots, outdoor machinery operators

7V Battery

12V Battery Harness

12V Accessory Adapter

12V SAE to Coax Female

Hybrid Controller

12V RCA to Female Coax

7V BATTERY-POWERED CLOTHING

COMMON QUESTIONS

WHAT KIND OF BATTERY IS IT?

It is a rechargeable 7V, 3500 mAh Lithium-Ion battery.

HOW LONG WILL THE 7V BATTERY POWER MY CLOTHING & WHAT ARE THE SETTINGS?

The length of time ranges from 2-11 hours but depends on the specific product connected & temperature setting. For example, a vest is at least 2-8 hours, but a scarf is 3-11 hours.

The battery's built-in controller has 4 power levels to control the temperature output: 25%, 50%, 75%, 100%. The temperature output ranges from approximately 105°F to 135°F.

HOW DO I CHARGE THE BATTERY & WHAT'S INCLUDED WITH THE CLOTHING?

The battery can be charged using our 7V Wall Charger or Car Charger. It typically takes 3-4 hours to fully charge a completely discharged battery. All clothing comes with everything needed for operation.

	Batteries	Wall Charger	Y-Harness
Socks	2	Dual	Yes
Gloves	2	Dual	No
All Other Clothing	1	Single	No

WHAT IS THE TYPICAL LIFESPAN OF A BATTERY?

When cared for properly, its lifespan is up to 500 charge cycles. To extend the life of your battery, maintain at least a 25% charge when not in use. Do not store it in extreme hot or cold environments for extensive lengths of time to avoid battery malfunction or decreased performance.

WHAT IF THE 7V CLOTHING OR 7V BATTERY GETS WET?

The battery is built to be water-resistant and withstand most weather conditions. However, the battery is not meant to be submerged in water or other liquids. All our clothing wiring is sealed with a heavy-duty coating, so there is no risk if it gets wet.

CAN I CONNECT MY 7V CLOTHING TO A 12V POWER SOURCE?

Yes! With the Hybrid Heat Controller, you can power 7V battery-powered heated gear using a Motorcycle, Powersport Vehicle, or any 12V Accessory Port.

12V POWERSPORT CLOTHING

COMMON QUESTIONS

HOW DO I CONNECT MY 12V HEATED CLOTHING?

There are multiple power adapter choices to connect to a 12V power source:

12V BATTERY HARNESS

The battery harness connects directly to the positive & negative terminals of your battery. It includes a 15A fuse, which can handle the draw of an entire heated clothing outfit.

12V ACCESSORY PLUG / BMW PLUG

The accessory plug works with a standard 12V DC outlet, commonly found on vehicles including cars, buses, boats, tractors, and more. Remove the red cap and it becomes a DIN plug that works on BMW motorcycles and other vehicles using that type of power port. Max capacity 8A.

12V SAE TO COAX - FEMALE

The SAE to coax female connects directly to a battery tender cable, however, the fuse in the battery tender of many vehicles is only 3-5 amps. Therefore, you MUST replace it with a 15A fuse to handle the draw of an outfit. If you opt to connect via SAE, we recommend no longer using it as a battery tender to avoid a malfunction resulting in damage to your battery.

12V RCA TO COAX - FEMALE

The RCA Adapter allows you to power your heated gear using snowmobiles or other vehicles that have an RCA port. It can also be used with the heated visor plug installed on your vehicle.

WARNING: With all methods of connecting, a temperature controller should ALWAYS be used. A controller regulates the heat output to make sure you ride comfortably and safely. Without a controller, you will experience a constant temperature of at least 135°F.

CAN MY 12V ELECTRICAL SYSTEM HANDLE THE DRAW?

Refer to your owner's manual to look up the wattage of your vehicle's 12V electrical system. Refer to the chart for the total draws of each piece of heated gear. The 15A fuse already included with the battery harness will easily handle an entire heated clothing outfit.

	Gloves (per pair)	Socks (per pair)	Jacket	Pants
Amp Draw	2.4	2.4	6.4	4.6
Watts	27	27	77	55

HOW DO I CONNECT 2 PEOPLE TO THE SAME 12V POWERSPORT VEHICLE?

Each person must have a separate temperature controller and power adapter (Battery Harness, Accessory Plug, RCA, or SAE). Using only one controller & power connection may overload your battery or the controller and could result in damage to the products, cause them to malfunction, and/or cause bodily harm.

WHAT IF THE 12V CLOTHING OR ACCESSORIES GET WET?

All our clothing wiring is sealed with a heavy-duty coating and products are built to withstand most weather conditions, so there is no risk if it gets wet.

Temperature Controller Comparison

Junior

- Push button control with 4 power levels & lighted indicator
- Y-harness attached to controller
- Designed for 12V gloves or socks ONLY (handles 5A max)

Dual Digital

- Push button controls with 10 power levels & digital display
- Control temperature of two+ clothing items individually
- Ability to pair with the wireless remote (sold separately)

Single Dial

- Adjustable knob has 40 variable temperature stages
- Control temperature of one clothing item

Dual Dial

- Adjustable knobs each have 40 variable temperature stages
- Control temperature of two+ clothing items individually
